

National Pollution Prevention Roundtable 2025 Safer Chemistry Challenge Program

Alliance Member Agreement

The National Pollution Prevention Roundtable's (NPPR) 2025 Safer Chemistry Challenge Program (SCCP) seeks to motivate, challenge, and reward safer chemistry practices in businesses to reduce the use of chemicals, especially hazardous and toxic chemicals, through source reduction and pollution prevention measures. Alliance membership is open to academic institutions, state/local/federal government, and environmental/social/advocacy organizations at no cost, when you become a member of NPPR.

In joining the SCCP, we agree to:

1. Market local SCCP events such as Green Screen training and green chemistry conferences.
2. Promote safer chemistry by encouraging local industries to join the SCCP program.
3. If possible, provide assistance to SCCP members by helping to identify opportunities for reduction of chemicals of concern and finding safer alternatives.
4. Link SCCP members to local recognition programs.
5. Promote safer chemistry through reporting and documentation of SCCP outreach activities to NPPR.
